**Example of mounting position**

**<<<<<< IT IS RECOMMENDED THAT THIS PRODUCT BE INSTALLED BY A QUALIFIED TECHNICIAN >>>>>>**

- 1) Be sure the motorcycle is cooled down and safe to work on.
- 2) This carburetor catch tank is designed with three vent inputs and one vent output (to vent the catch tank itself).  
Sample routing instructions below:
  - Carb Catch Tank Vent (route to under the fuel tank)
  - Float Bowl Drain (route to carb catch tank)
  - Carburetor Breather Vent, Left Side-Horizontal (route to carb catch tank)
  - Carburetor Breather Vent, Left Side-Vertical (reroute to airbox)
  - Carburetor Breather Vent, Right Side-Horizontal route to carb catch tank)
  - Carburetor Breather Vent, Right Side-Vertical (reroute to airbox)
- 3) The hose nipples are designed to be used with a .125" ID (3mm ID) fuel hose. Be sure to properly secure the vent hoses to the hose nipples to prevent the hoses from coming off.
- 4) The picture above shows the carburetor catch tank mounted on a Yamaha YZF450F (2006). This tank can be mounted anywhere on any bike as long as it is below the carburetor float bowl.
- 5) It is necessary to drain the catch tank after every ride. Please do so via the drain plug being sure to properly secure it afterwards.
- 6) Be sure to mount the carburetor catch tank securely.
