

## DM010K : Damper Mount Yamaha R6 (2006)

### PARTS LIST

• Mounting Bracket	n/a	1
• Fork Clamp, 50mm	n/a	1
• Button Head Bolt, 8mm x 30mm	OB.8x30BS	2
• Flat Head Bolt, 6mm x 25mm	OB.6x25FZ	2
• Socket Head Bolt, 6mm x 20mm	OB.6x20SS	1

<<<<<< IT IS RECOMMENDED THAT THIS PRODUCT BE INSTALLED BY A QUALIFIED TECHNICIAN >>>>>>

- 1) Please be sure the motorcycle is cooled down and safe to work on.
- 2) **Part # DM010K is a limited edition, factory racing part and as such, requires an experienced mechanic to install properly.**
- 3) **This damper mount requires the removal of the key switch. This must be done in order for the steering damper to mount properly. The key switch will have to be replaced with a toggle switch mounted on the fairing bracket. Graves Motorsports does not provide instructions or tech support on how to relocate and rewire the switch.**
- 4) This damper mount is designed to be used with an Ohlins steering damper (Graves Motorsports part # SD068) which will need to be purchased separately.
- 5) Install the mounting bracket onto the right side of the ram air duct. Apply thread locking compound and torque (15 Nm / 11 ft lbs).

- 6) Install the fork clamp onto the left fork leg, under the handlebars. The fork clamp is mounted with the step pointing downward.

- 7) Install steering damper (per the photo) and align the fork clamp. Apply thread locking compound and torque (15 Nm / 11 ft lbs) the pinch bolt.

- 8) Torque (15 Nm / 11 ft lbs) the damper mount bolts.
- 9) Check steering for lock to lock clearances; adjust fork leg clamp and damper body clamp to achieve full lock to lock steering movement.
- 10) Periodically check the torque on all of the bolts.
